

Emergency command products

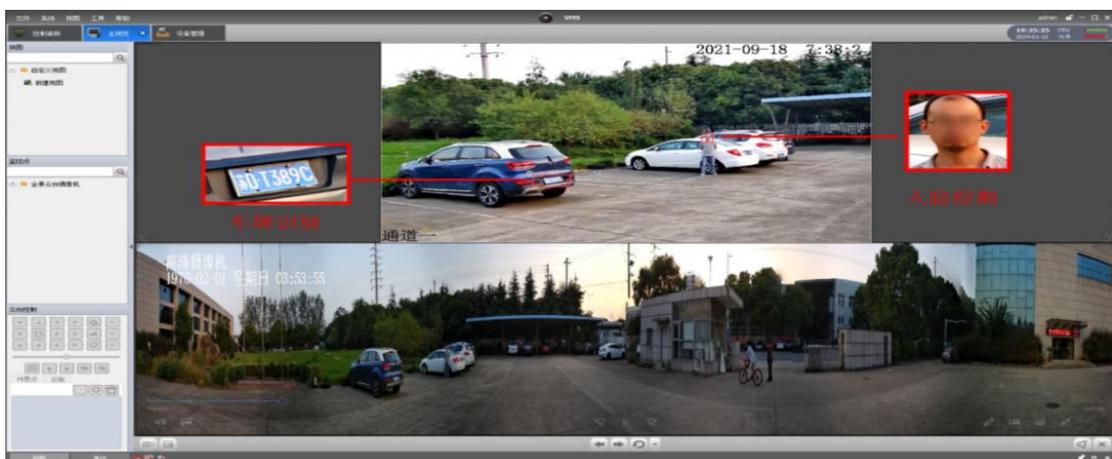

This kind PTZ by using 360 ° surround view monitoring and stitching fusion to output ultra clear 4K resolution panoramic images, the problem of blind spots and blind spots in large scene monitoring is solved.

By 4G or 5G NVR to efficiently transmitted without delay to the backend platform, the backend command center deploys and schedules in a timely manner based on panoramic images, satellite positioning signals, and data, and controls on-site dynamics at any time.

Support AI voice recognition technology for quick control of 360 panoramic 4K intelligent high-definition car gimbal device, which can control the gimbal orientation, camera zoom, wiper control, infrared light on and other functions through voice control. It is contactless control, releasing both hands. Even if the original operator changes, there is no need to worry about not being able to operate the equipment.

The installation method is convenient, flexible and versatile, supporting installation methods such as car mounts, magnetic suction, tripods, etc., suitable for emergency command and temporary control.

Mainly used in scenarios such as mobile law enforcement and temporary control by public security, traffic police, urban management, fire protection, and emergency management departments, it effectively improves the efficiency of supervision and law enforcement by relevant departments, achieves technological strengthening of police, helps to build a safe city, and safeguards social security!
