

Minkig' s products

Minking currently has multiple production lines for producing different product lines:

1. PTZ & Speed Dome PTZ products
2. Power monitoring products
3. Bird repellent products for substations
4. Vehicle monitoring products

Minking PTZ including IP, SDI+IP, AHD and other types of products, are commonly used for routine road monitoring, urban monitoring, park monitoring, and so on.

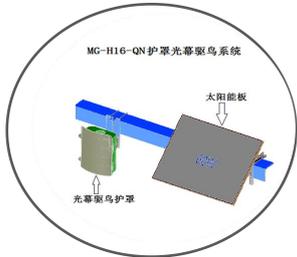

Power monitoring products are used to monitor the safety of power lines, such as large construction machinery : such as cranes, excavators, and bulldozers, to prevent threats to power transmission lines and prevent people from using electricity normally.

Substation bird repelling products are mainly used to repel birds in substations,

ensuring safety and preventing power failures and electrical hazards. Substation bird repellent products can also support AI to recognize birds and then drive them away, reducing PTZ wear and tear during continuous operation.

Vehicle monitoring products mainly include PTZ, microphones, keyboards, voice controlled touch display screens, etc. All of these are designed to facilitate police to use and better ensure people's safety.
